Objective

Currently pursuing my engineering degree in Telecommunications & ICT at Sup'Com, I'm driven by a deep curiosity for how technology shapes the world. From AI to IoT and full-stack development, I'm actively seeking hands-on opportunities where I can both learn fast and deliver real value.

Education

- **Higher School of Communication of Tunis** 2024–2027
National Engineering Degree in Telecommunications Ariana, Tunisia
- **Preparatory Institute for Engineering Studies of Monastir (IPEIM)** 2022–2024
Preparatory cycle for national engineering school entrance exam Monastir, Tunisia

Experience

- **Internship – SAIPH (Société Arabe des Industries Pharmaceutiques)** July 2025
ICT Department Intern Tunisia
 - Worked within the ICT department of a leading pharmaceutical company, gaining hands-on exposure to industrial IT systems and infrastructure.
 - Gained practical exposure to enterprise ICT systems while adapting quickly to a professional, cross-functional team.
 - Developed strong communication and teamwork skills by working alongside experienced engineers and IT staff.

Projects

- **AI-Assisted Roommate Matching Mobile Application** 2025
React Native, FastAPI, Python, Claude API, NLP, Clustering 
 - Built a cross-platform mobile application connecting individuals seeking shared housing with compatible roommates using an AI-powered matching system, reducing manual search effort by up to 70%.
 - Implemented a recommendation engine leveraging NLP and clustering techniques to analyze 5+ user profile criteria, including lifestyle preferences and location, to suggest the most compatible roommates.
 - Designed an intuitive interface featuring 8+ core screens including profile creation, smart search, real-time messaging, and match scoring, alongside an owner dashboard for posting and managing properties.
 - Integrated a conversational AI assistant powered by Claude API, handling 100+ potential user queries related to the roommate search process and housing-related topics.
- **Health Connect – A full-stack healthcare platform bridging patients and specialized medical professionals in Tunisia.** 2025
React.js (Vite), Flask (Python), MySQL 
 - Collaborated with a teammate to design and develop Health Connect, a full-stack healthcare platform bridging patients with specialized medical professionals in Tunisia.
 - Implemented dual authentication flows for patients and doctors, alongside specialty-based browsing across 5 medical fields (Cardiology, Dentistry, Dermatology, Ophthalmology, Pediatrics).
 - Delivered a responsive, cross-device UI with a dedicated doctor dashboard for schedule and patient data management.
- **TakeCar – Real-Time Bus Tracking Mobile Application** 2025
Flutter, Firebase Auth, Cloud Firestore, Firebase RTDB, Geolocator 
 - Built a cross-platform mobile app enabling users to search transit routes, track live bus positions, view trip history, and report issues.
 - Implemented GPS-based and text-based route search with direct and multi-transfer trip generation using Firestore and the latlong2 package.
 - Integrated Firebase Realtime Database for live bus location updates with a fallback mechanism for unavailable data.
 - Designed a role-based authentication system (user/driver) using Firebase Auth and Cloud Firestore with driver code validation.

Skills

- **Programming Languages:** Python, JavaScript, C++, Java, MATLAB

- **Frameworks:** Angular, Spring Boot, React Native, FastAPI, Flask, TensorFlow, Flutter
- **AI & ML :** Machine Learning, Deep Learning, AI Algorithms, NLP, Clustering,MCP (Model Context Protocol)
- **Web Technologies:** HTML, CSS
- **Database Systems:** MongoDB, PostgreSQL, MySQL
- **Tools:** Visual Studio Code, Kaggle,Git,Github, MATLAB, Docker, Postman, Ollama ,Cisco Packet Tracer
- **Social Skills:** Public speaking, team management, Communication

Social Life

- **Media Manager – Club ambassadeur VESOS Sup’Com** 2025–2026
Sup’Com
- **Project Pacte – WasteToWonder** 2025–2026

 - Led a sustainability-focused initiative collecting coffee ground waste from local sources and repurposing it into natural plant fertilizer.
 - Promoted circular economy principles by transforming organic waste into an eco-friendly agricultural resource, raising environmental awareness within the community.

Certificates

- CCNA1: Introduction to Networks – Cisco Networking Academy
- TOEIC – English Proficiency Certificate
